Troubleshooting Write-Up

Student Name: _____Arin Tang_____

Date: _____10/21/26_____

Instructions

Complete a basic troubleshooting exercise.

Document:

- The issue
- The troubleshooting steps performed
- The resolution

Examples include:

- Printer issues
- Audio issues
- Application issues
- Network connectivity issues
- Login issues

Response

The user experienced a network connectivity issue where their computer displayed "Connected, no Internet" while connected to the router. After asking the user about recent power outages, I checked other devices on the same Wi-Fi network and confirmed they showed the same message, establishing that the issue was centered on the router or overall connection rather than a single device. Upon inspecting the router, I noticed that this particular router model had a red light on the WAN LED indicator, while checking the back of the router confirmed that all Ethernet cables were undamaged and securely connected. I then rebooted the router, which successfully restored the connection as indicated by the WAN LED turning white. Finally, I reconnected the devices to confirm active internet access, asked the user to perform their daily tasks to verify full system functionality, and documented the issue, troubleshooting steps, and resolution.
